

The ultimate crime deterrent

WELCOME TO THE ULTIMATE DETERRENT TO VIOLENT CRIME.

DNADetect.

The next level in Forensic Perpetrator Marking.

Covert Spray Actuator

What is DNA Detect's Covert Spray Actuator?

- It is an integrated compact modular DNA based Forensic Security System which can be completely concealed within, for example a door frame or above any entry point.
- The unique DNA and UV mark will forensically link an offender to a crime scene providing irrefutable evidence to prosecuting authorities

How does the system work?

- When installed above or within an entry point or a door, the system will activate when the door is attacked. The perpetrator will be Forensically marked with a DNA based Forensic Marker and Orange UV, dispensed as a covert spray from within the door frame or over the entry point.
- The unique DNA code within each door frame installation is backed up and registered on an LPS1224a secure database managed by the International Security Register (ISR) The Forensic DNA component within DNADetect's system is widely tested and proven in court as a highly effective deterrent to criminal activity.
